**Abstract** Science is a knowledge based on hypotheses, observations, and experiments. From its very beginning science has served the humanity and will continue to do so until the needs of human being are fulfilled. History is rich of many scientists who have contributed to different fields of science free of politics, religion, cast, and region. Every human being must have the right to use science and technology for beneficial purposes. Mutual coordination between academia and industries is extremely important for the growth of science. The spread of ideas is only possible with publication and distribution of information to all in the world. Unpublished new ideas will remain hidden. With no doubt, many of publications and products get the spirit from the very first ideas. It is necessary that all scientists share their ideas, opening new opportunities for others to work in the various aspects. We are of the view that, to find a solution to our problems or satisfy human needs, it is important to ponder new ways in science, generate new ideas and share with others, so the concept of “science for the benefits of all” remain alive forever.
