Section I

Title: Nursing

Degree: BSc

Introduction

Nursing is a profession within the health care sector focused on the care of individuals, families, and communities so they may attain, maintain, or recover optimal health and quality of life. Nurses may be differentiated from other health care providers by their approach to patient care, training, and scope of practice. Nurses practice in a wide diversity of practice areas with a different scope of practice and level of prescriber authority in each. Many nurses provide care within the ordering scope of physicians, and this traditional role has come to shape the historic public image of nurses as care providers. However, nurses are permitted by most jurisdictions to practice independently in a variety of settings depending on training level.

Definition:

Nursing is an independent program, and is a sub-branch of medical science. Nursing graduates as a member of healthcare team will be working in areas related to health care, education, research, consultancy, prevention, management, and rehabilitation. BSc in nursing is the first level of nursing education which has been developed based on scientific and religious criteria. Nursing education at the BSc level trains professional nurse, who as a general staff nurse, would be able to take a responsibility of health assessment, coordination and implementation of care for individuals and families in different areas of practice.

The Aim of the course:

Mission: The mission of nursing education at BSc level is to train knowledgeable, committed, competence and efficient professionals, who by gaining professional abilities and latest knowledge, are capable of providing, maintaining and improving healthcare and rehabilitation services for the society that are cost-effective with highest standards. This could be achieved through education, research and development of nursing knowledge.

Vision: Based on the program, in ten year time along with changeable world, students will be educated based on international and regionals standards, secure their position in prevention and different areas of health care, will take national jobs, deliver cost-effective and high quality health care to improve the health of society and quality of patients' life and will be well-known in the region and internationally.

Aims: The main aim of the program is to train nursing professionals who as a member of healthcare team will be able to work in areas related to health care, education, research, consultancy, prevention, management, and rehabilitation to provide, maintain and improve the health of individual, family and the society.
