

# In the Name of God

## Degree: Doctor of Dental Surgery (D.D.S.)

### Introduction

D.D.S. is a six-year program which consists of a competency-based educational plan with emphasis on prevention caring, so that graduate students, besides sufficient and comprehensive knowledge in up-to-date dentistry sciences, have the skills for visiting patients and treating different kinds of oral and dental diseases. In this program, students pass basic sciences in two years and then enter the clinic for four years in order to pass courses in all dentistry departments and learn the diagnosis of different kinds of diseases in each department. The student completes a total of 207 credits within six years. As a result of working with numerous patients, students will become highly skilled in their clinical stage.

### ❖ Basic Sciences

In four semesters, **Basic Sciences** Courses cover the natural structure of the body at the molecular and cellular level (biochemistry, histology and anatomy) of development (embryology) and function (physiology) that all are presented in the form of integrated blocks. In addition to these, different subjects (microbiology, parasitology, mycology, virology, immunology, and pathology) are also provided for the students along with general courses.

At the end of basic science, **comprehensive exam** will be held.

### ❖ pre-Clinical phase

The students pass pre-clinic courses in the fifth semester in laboratories with different kinds of modules and educational models that are simulated with real clinical conditions and patients. After acquiring the requirements, eligible students enter the clinics, and visit and treat patients. In the clinical stage, students (in small groups) enter the clinic and treat patients. Students of Community Dentistry program enter the field and start the process of screening patients in the society.

### ❖ Clinical phase

In the twelfth semester, students who have acquired enough skills as interns or pre-doctoral students enter the main clinic and visit patients in a similar fashion to practices in a private office under the supervision of proficient professors. In the main clinic, students, besides making medical files for the main treatment program, treat all kinds of dental problems of patients.

At the end of this semester, students test their scientific and practical capabilities by taking a final exam.

## **Goals of the D.D.S Education Program**

After completing the educational program for the D.D.S degree, our graduates will demonstrate:

- To prepare highly qualified dental hygiene healthcare professionals.
- Application of their knowledge and skills to the practice of dentistry, including formulating an appropriate problem list, a set of competing hypotheses, and a diagnostic and therapeutic plan;
- Progress in the development of self-directed life-long learning skills, including the recognition of personal educational needs, selection of appropriate learning resources and evaluation of progress;
- Professionalism through a commitment to professional responsibility, ethical principles, reflective practice, and self-improvement;
- Communication skills, including effective and humane interactions with patients, colleagues, health care personnel, and members of the community;
- Ability to function as a collaborative member of the healthcare team;
- incorporation of pedagogy that fosters problem solving and critical thinking skills as a basic feature of the curriculum
- flexibility to allow for enrichment, adaptability to learning styles, and developing alternate careers
- recognition of the role of technology in the educational process and access to information for the efficient and effective practice of dentistry
- continuous evaluation by appropriate outcome data to ensure quality and continuous improvement

## **Mission**

The primary mission of Tehran University of Sciences, School of dentistry is to provide access to high quality, publicly-funded dental education to regions in order to develop dentists who will make a personal commitment to serving the needs of rural and underserved communities through outreach programs that are especially attentive to minority and underserved populations.

Students learn about the upstream factors that affect the health outcomes, such as personal behaviors, health care quality and access, social, cultural and economic factors, and the built and natural environment

The educational mission of TUMS is to graduate dentist with the ability and desire to improve the health of all populations by alleviating suffering and eliminating healthcare disparities through their leadership in patient care, research, education, health care administration and the community.

**General Competencies** It is essential for Dentistry students to have good written and oral communication skills. Students must be able to communicate effectively with patients, physicians and with other members of the health care team. The final applicant pool may be interviewed.

**The Terms and Conditions of Admission to the Course** All applicants must apply electronically on our website [www.gsia.ac.ir](http://www.gsia.ac.ir). After an application is submitted, the applicant will receive a confirmation e-mail and an application code from the Office of Admissions indicating successful submissions of the application.

If any part of the application is incomplete, our admission coordinator will request the missing information and mark the application incomplete until the requested information is submitted. The completed application form is reviewed in the preliminary review council (PRC).

Once the initial preliminary review council (PRC) has made a decision, the application will be sent to the School and the related department, for an Admission Review.

If you have requested or applied for a scholarship, your application is also forwarded to the Scholarship Committee.

**Student Assessment** Students should take part in the end of term exams for each module separately. Some lectures may decide to take an additional exam in the mid-term. The pass criteria for most exams are 50% of the total mark. However, if the average mark for all exams taken in each term is less than 10 out of 20, the student's admission to the next term would be conditional in which a reduced number of modules could be taken. Repetitive conditional admission may result in student being expelled from the Pharmacy program.

## **Ethical issues**

The graduates should,

- Observe the Patient's Bill of Rights<sup>1</sup> when working with the patients.
- Strictly observe Biosafety and Patient Safety Rules\* concerning the patients, personnel and workplace.
- Observe the Rulebook for Dress Code<sup>2</sup>.
- Strictly observe the Regulations of Working with the Laboratory Animals<sup>3</sup>.
- Carefully preserve resources and equipment.
- Truly respect faculty members, the staff, classmates and other students and work for creating an intimate and respectful atmosphere.
- Observe social and professional ethical considerations in criticism.

1, 2 and 3 are contained in the Enclosures.

\* Biosafety and Patient Safety Rules will be set out by the Educational Departments and will be available to the students.

## Number and Type of Credits and Tables of the Courses

Total Number of Credits: 207

<b>DDS program Course Syllabus for International Students</b>					
<b>DDS- 1<sup>st</sup> semester</b>					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	<i>Anatomical Sciences I</i>	3.0	1.0		4.0
2	<i>Biochemistry</i>	4.0	1.0		5.0
3	<i>Application of computer in dentistry</i>	1.0			1.0
4	<i>Devine ethics</i>	2.0			2.0
5	<i>Introduction to Religion I</i>	2.0			2.0
6	<i>General English Language</i>	3.0			3.0
	Total	15.00	2.0		17.00

<b>DDS- 2<sup>nd</sup> semester</b>					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	<i>Anatomical Sciences II</i>	2.0	1.0	<i>Anatomical Sciences I</i>	3.0
2	<i>Parasitology</i>	1.0			1.0
3	<i>Medical Physics</i>	1.0			1.0
4	<i>Social Health</i>	1.5	0.5		2.0
5	<i>Family Health</i>	2.0			2.0
6	<i>Psychology</i>	2.0			2.0
7	<i>Persian Language</i>	3.0			3.0
8	<i>Medical Terminology I</i>	1.0		<i>General English Language</i>	1.0
9	<i>Physical Training I</i>		1.0		1.0
10	<i>Introduction to Religion II</i>	2.0		<i>Introduction to Religion I</i>	2.0
	Total	15.5	2.5		18.0

**DDS- 3<sup>rd</sup> semester**

	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	<i>Anatomical Sciences III</i>	1.0	1.0	<i>Anatomical Sciences II</i>	2.0
2	<i>Physiology</i>	5.0	1.0	<i>Biochemistry</i>	6.0
3	<i>Immunology</i>	2.0	1.0		3.0
4	<i>Virology</i>	1.0			1.0
5	<i>Microbiology</i>	3.0	1.0		4.0
6	<i>Medical Genetic</i>	2.0			2.0
7	<i>Divine texts</i>	2.0			2.0
	<b>Total</b>	<b>16.0</b>	<b>4.0</b>		<b>20.0</b>

**DDS- 4<sup>th</sup> semester**

	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	<i>Pathology</i>	2.5	0.5		3.0
2	<i>Radiology Sciences I</i>	1.0	1.0		2.0
3	<i>Cariology</i>	1.0			1.0
4	<i>Dental Anatomy and Morphology</i>	2.0			2.0
5	<i>Infection control</i>	1.0			1.0
6	<i>Clinical Communication Skills</i>	1.0			1.0
7	<i>Advanced Terminology II</i>	1.0		<i>Medical Terminology I</i>	1.0
8	<i>Iran Revolution</i>	2.0			2.0
9	<i>Physical Training II</i>		1.0	<i>Physical Training I</i>	1.0
	<b>Total</b>	<b>11.5</b>	<b>2.5</b>		<b>14.0</b>

DDS- 5 <sup>th</sup> semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	<i>General Pharmacology</i>	2.0			2.0
2	<i>Theoretical Oral and Maxillofacial (OMF) Surgery 1</i>	1.0			1.0
3	<i>Diagnostic Dentistry 1</i>	1.0			1.0
4	<i>Theoretical Restorative Dentistry 1</i>	1.0			1.0
5	<i>Practical OMF Pathology 1</i>		1.0		1.0
6	<i>Specialized English 1</i>	1.0			1.0
7	<i>Specialized English 2</i>	1.0			1.0
8	<i>Basics of Restorative Dentistry</i>	2.0			2.0
9	<i>Practical DMF Radiology 1</i>		1.0		1.0
10	<i>Medical Emergencies in Dentistry</i>	1.0			1.0
11	<i>Basics of Dental Materials</i>	1.0			1.0
12	<i>Basics of Complete Prosthodontics</i>	2.0			2.0
13	<i>Basics of Partial Prosthodontics</i>	1.0			1.0
	<b>Total</b>	<b>14.0</b>	<b>2.0</b>		<b>16.0</b>

DDS- 6 <sup>th</sup> semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	<i>Practical OMF Surgery 1</i>		1.0		1.0
2	<i>Practical OMF Surgery 2</i>		1.0		1.0
3	<i>Practical Restorative Dentistry 1</i>		1.0		1.0
4	<i>Practical OMF Pathology 2</i>		1.0		1.0
5	<i>Pulp and Periodical complex</i>	1.0			1.0

4	<i>Theoretical Implantology</i>	1.0			1.0
5	<i>Thesis 4</i>	4.0			4.0
	Total	9.0	2.0		11.0

**COURSE NAME:** Biochemistry

**NUMBER OF CREDITS:** 4.0 (theory) – 1.0 (practical)

**COURSE TYPE:** Theoretical and Practical

**GENERAL AIMS and DESCRIPTION:**

This is the first term of DDS program in Tehran University of Medical Sciences, the Biochemistry Program fosters interactions among students and faculty, helping to broaden the students' appreciation of diverse research opportunities and to encourage interdisciplinary thinking in a highly collaborative atmosphere. This program has been an integrative force that aims to tie together the various disciplines of genetics, biochemistry, microbiology, immunology, cell biology and others. The goal is to train our students to examine scientific problems from many perspectives through individualized, flexible programs of coursework and research. The biochemical pathways of living organisms are studied with a focus on metabolic processes. Topics include pathways linking nutritional intake and energy yielding processes as well as the application of underlying. Broad content includes a study of the chemistry and reactions of constituents of living matter, including carbohydrates, lipids, proteins, nucleic acids, vitamins, coenzymes, and minerals. In addition, the chemistry and regulation of the reactions and processes of whole organisms will be examined including: endocrinology, enzymology, nutrition, intermediary metabolism and biochemical mechanisms involved in select disease states.

**COURSE NAME:** Anatomical Sciences I

**NUMBER OF CREDITS:** 3.0 (theory) – 1.0 (practical)

**COURSE TYPE:** Theoretical and Practical

**GENERAL AIMS and DESCRIPTION:**

This is a lecture and laboratory course that examines the microanatomy of cells, tissues and organs. Lectures illustrate the microstructure of major tissues and organs in relation to their function. Laboratory exercises use the light microscope to study these components and make use of slides and electron micrographs for review and discussion. This lab-oriented program presents the molecular biology and histology of normal cells, tissues and organ systems at various developmental functional stages. Students learn how individual cell functions interact with one another and how such interactions are accomplished from the tissue levels to the organ levels. The course introduces molecular and control systems and prepares students for an understanding of normal (homeostasis) systems and pathological conditions. In addition, students learn how molecular building blocks are utilized for growth and differentiation, wound healing and tissue repair, defence mechanisms and transfer of hereditary characters.

**COURSE NAME:** Anatomical Sciences II

**NUMBER OF CREDITS:** 2.0 (theory) – 1.0 (practical)

**COURSE TYPE:** Theoretical and Practical

**GENERAL AIMS and DESCRIPTION:**

Identify key events and stages in development of Head and Neck system structures (Anatomy, Histology and Embryology). Summarize the main structures and functions within the major divisions of the normal nervous system: the brain, spinal cord and peripheral nervous system along with Histology of Head and neck . Describe how regional nervous system structures interact to perform specific functions. Locate nervous system dysfunction based on common neurological syndromes. Synthesize vascular anatomy and neuroanatomy to locate dysfunction in ischemic stroke syndromes. Exhibit critical thinking, effective communication, problem solving and interpersonal skills to contribute to a high-performance team. Provide constructive feedback to peers and use peer feedback to identify and improve strengths and limitations in skills and attitudes.

**COURSE NAME:** Anatomical Sciences III

**NUMBER OF CREDITS:** 1.0 (theory) – 1.0 (practical)

**COURSE TYPE:** Theoretical and Practical

**GENERAL AIMS and DESCRIPTION:**

This required system-based block integrates the basic sciences into a study of neuroscience and behavior in both health and disease. Each of the basic science topics is incorporated into an integrated body of knowledge covering neuroanatomy, neurophysiology, neurological correlations, neuropharmacology, neuropathology, human behavior and psychiatry, utilizing both didactic and self-directed learning methods and clinical models.

2. **Junqueira's Basic Histology**. McGraw-Hill Medical 2010; 12th edition,
3. • chapter 9, pages 152-158
4. **Langman's Medical Embryology**. Lippincott Williams & Wilkins 2012, 12th edition,
5. • chapter 18, pages 287-320
6. **Guyton and Hall Textbook of Medical Physiology**. Saunders 2011, 12th edition
  - Chapters 45-48
  - Chapters 54-60

### ***Anatomical Sciences III (practical) subjects***

<b><i>Session Title</i></b>	<b><i>Hrs.</i></b>
<i>Anatomy of the vertebral canal and spinal cord</i>	2
<i>Spinal cord and spinal nerves</i>	2
<i>Autonomic nervous system and the body dermatome</i>	2
<i>Brainstem and cerebellum</i>	2
<i>Dyansfal and the cerebral hemispheres</i>	2
<i>Vessels and membranes of the brain and cranial nerves</i>	2
<i>Applied anatomy of the brain vessels, blinds and sinus</i>	2
<i>Cranial venous</i>	2
<i>Histology of the spinal cord, cerebellum, cerebral cortex and nerve tissue</i>	2
<i>Investigating the neural reflex</i>	2
<i>Two-point discrimination</i>	2
<b><i>Total hrs.</i></b>	<b>20</b>

### ***Anatomical Sciences III (theory) subjects***

<b><i>Session Title</i></b>	<b><i>Hrs.</i></b>
<i>Division of the nervous system &amp; spinal cord appearance</i>	2
<i>The internal structure of the spinal cord</i>	2
<i>Medulla oblongata</i>	2
<i>Pons</i>	2
<i>Midbrain</i>	2
<i>Cerebellum</i>	2
<i>Diencephalon</i>	2
<i>Cerebral hemispheres</i>	2
<i>The cerebral hemispheres and basal Nuclei</i>	2
<i>Limbic system and reticular formation</i>	2
<i>Vessels and Meninges</i>	2
<i>The structure of cranial nerves</i>	2
<i>Embryology of Nervous system</i>	2
<i>Radiological and clinical anatolgy of brain and spinal cord</i>	2
<b><i>Total hrs.</i></b>	<b>28</b>

**COURSE NAME:** Medical Microbiology

**NUMBER OF CREDITS:** 3.0 (theory) – 1.0 (practical)

**COURSE TYPE:** Theoretical and Practical

### **GENERAL AIMS**

1. Learning the principles of microbiology, including the structural and physiological properties of microorganisms and their roles in diseases and the methods to control them.
2. Classification of pathogens
3. Treatment of bacterial diseases
4. Familiarizing students with the structure of microorganisms, staining, lam preparation

### **LEARNING OUTCOMES**

**Students must:**

1. Know microbial and physiological principles
2. Know the methods and problems of microorganism classification
3. Know pathogenic and epidemiological mechanisms
4. Know antiseptic effect mechanisms
5. Know control methods the mechanisms of antibiotic effects
6. know the methods to determine the effect mechanisms of antibiotics
7. Be able to explain the relationship between dosage, parasite and the drug.
8. Know protection methods while working with microorganisms
9. Know methods to work with microorganisms, microscope use and microscopic and macroscopic identification of microorganisms
10. Be able to do cell culture and perform identification experiments
11. Perform antibiogram tests and know and examine antibiotic effects
12. Know microbiology lab equipment
13. Know staining methods
14. Be able to prepare culture medium
15. Know microorganism identification methods

**COURSE NAME:** Immunology

**NUMBER OF CREDITS:** 2.5 (theory) – 0.5 (practical)

**COURSE TYPE:** Theoretical and Practical

### **GENERAL AIMS**

Familiarizing students with the science of immunology and its use in understanding, preventing, diagnosis and treatment of disease.

The functions of the immune system and body defense mechanisms, different body organs which have significant roles in the functions of the immune system and the different types of immunity in body will be covered. Moreover in practical the aim is familiarizing students with different lab equipment and diagnostic testing kits and their use.

### **LEARNING OUTCOMES**

**Students must:**

1. Know pathogens and immunologic mechanism of diseases
2. Know resistance against diseases
3. Know lab diagnosis methods
4. Know immunologic substances used to cure diseases

**COURSE NAME:** Medical Genetics

**NUMBER OF CREDITS:** 2.0 (theory)

**COURSE TYPE:** Theoretical

### **GENERAL AIMS**

The increasing impact of genetics in healthcare and the development of newer sophisticated technologies require close collaboration between research scientists, clinical laboratory scientists and clinicians to deliver a high quality service to patients. The Medical Genetics course covers basic concepts of genetically disorders and the clinical genetics service, including risk analysis and application of modern genetic and genomic technologies in medical genetics research and in diagnostics and population screening.

### **LEARNING OUTCOMES**

**Students must:**

1. Know the History and Significance of Medical Genetics in the clinic.
2. Know the Genetics of Metabolic, Neurologic and Musculoskeletal Disorders.
3. Know Population Genetics and Medicine.
4. Know Modern Molecular Medicine- Gene Therapy.

**COURSE NAME:** Psychology

**NUMBER OF CREDITS:** 2.0 (theory)

**COURSE TYPE:** Theoretical

### **GENERAL AIMS**

Knowing the basic principles of psychology, different sense and thought processes is central to building a more effective relationship between the pharmacist and the patient and therefore this course will increase the knowledge of the pharmacist and familiarizing students with the principles of psychology and learning methods, thought process and perception

### **LEARNING OUTCOMES**

**Students must:**

1. Know the relationship between psychology and human mind and soul.
2. Know the principles of psychology.
3. Be able to explain different sense stages.
4. Know learning methods and thought processes.
5. Know human motivation.
6. Know psychological health.
7. Know the physiological principles of psychology.
