## Diabetic Nephropathy

**Prof. Dr. Reinhard Fünfstück**  
Sophien- und Hufeland-Klinikum Weimar  
Department of Internal Medicine  
Henry-van-de-Velde-Straße 2  
D-99425 Weimar

Weimar City General Hospital

## Diabetes, a growing global epidemic likely to affect ~500 million people by 2030

Prevalence (%) estimates of diabetes\* (age 20-79 years, 2030)<sup>1a</sup>

>90% of diabetic patients have type 2 diabetes<sup>1</sup>

\*All cases of diabetes, including type 1 and type 2 diabetes, and impaired glucose tolerance (IGT), in persons aged 20-79 years.  
<sup>1</sup>Absolute number of cases and national prevalence  
International Diabetes Federation. IDF Diabetes Atlas, 4th ed. Brussels, Belgium: International Diabetes Federation, 2009. <http://www.idf.org/diabetesatlas>, accessed July 6th 2011.

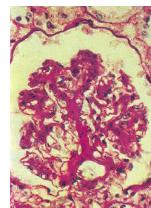

## Mortality and morbidity in type 2 diabetes in relation to the normal population

- Cardiovascular diseases → 2-3 times higher <sup>1)</sup>
- Stroke → 2-3 times higher <sup>2)</sup>
- Fatal myocardial infarction → 50 % <sup>2)</sup>
- Foot amputation → 40 times higher <sup>2)</sup>
- Blindness (» Severe retinopathy «) → 5 times higher <sup>3)</sup>
- Nephropathy (endstage renal disease) → 17 times higher <sup>3)</sup>
- Hypertension → 2-3 times higher <sup>2)</sup>
- Dyslipidemia → 3 times higher <sup>1)</sup>

Insulin/aldosterone signaling in the aldosterone sensitive part of the nephron

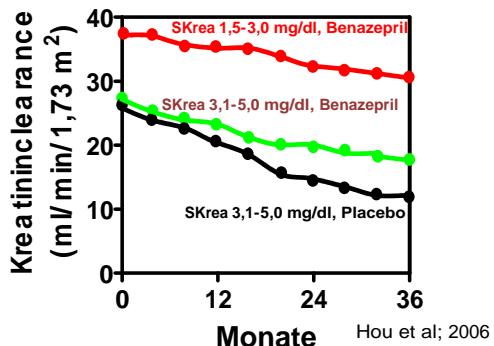

Friedrich B.: Diab. und Stoffw. 2010; 6:24-32

## What can we do ?

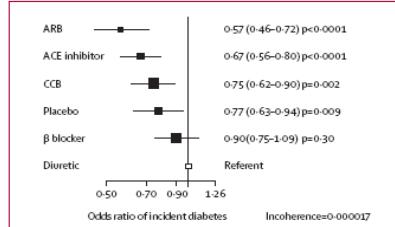

ACE-inhibitors are useful to reduce process of progression of renal insufficiency

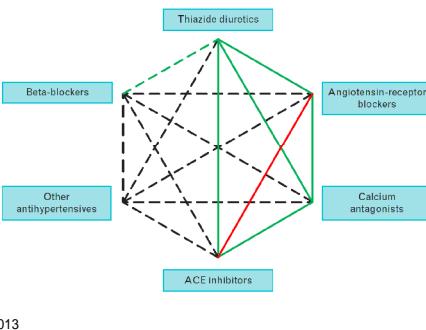

Relative risk to initiate metabolic disorders by antihypertensive drugs

Results of a metaanalysis in 143.153 hypertensive patients including in 22 clinical studies

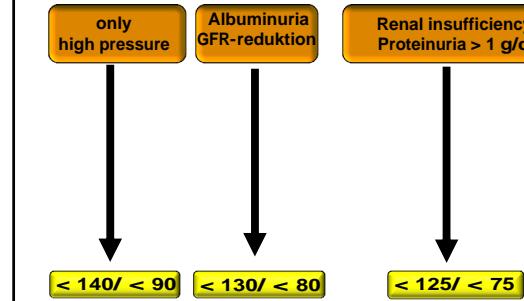

Elliott, WJ. et al., Lancet. 2007;369:201-207

Recommendations for antihypertensive treatment

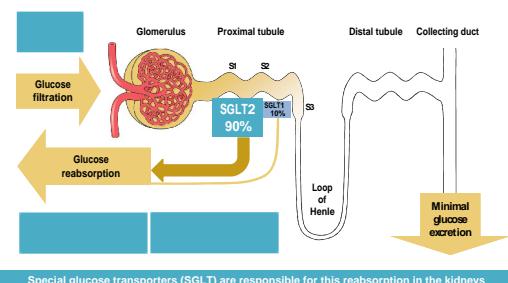

Optimal blood-pressure in patients with Diabetic Nephropathy

New therapeutical option for optimazing the metabolic situation

Kidneys filter and reabsorb 180 g of glucose per day in the nephrons by active transport

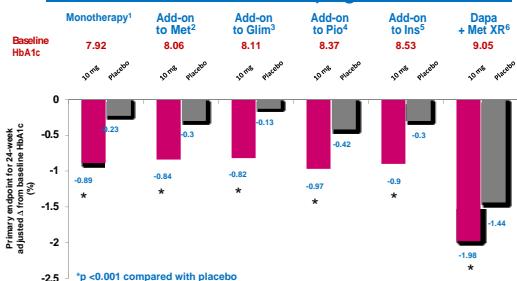

Wright EM. Am J Physiol Renal Physiol 2001;280:F10-8; Lee YJ, et al. Kidney Int Suppl 2007;106:S27-35; Brown GK. J Inher Metab Dis 2000;23:237-246.

## Gliflozines are potent and selective SGLT2 inhibitors in vitro and in vivo

- 1 Good oral bioavailability independent of food intake<sup>1</sup>
- 2 Half-life consistent with once-daily dosing<sup>1</sup>
- 3 Low risk of drug-drug interactions<sup>1-5</sup>
- 4 1200-fold selectivity for SGLT2 vs. SGLT1<sup>6</sup>

## General recommendations

## Consequences of the deterioration of renal function

R.Fünfstück, 2014

## Concepts of therapy in Diabetic Nephropathy (important supplementary strategies)

- Renal anemia : supplementation of erythropoietin- and compensation of the ferrum-deficit (Hb-level <11-12g/dl)
- Protein intake should be restricted (ca.0.8g/kg/Tag)
- Compensation of the metabolic acidosis
- Ban of nicotin
- Cave: administration of nephrotoxic substances (antibiotics,contrast media.....)
- Influence of renal osteodystrophy/osteopathia (supplementation of Vitamin D, prevention of the secundary HPT)

## Effect of a multifactorial intervention on mortality in type 2 Diabetes complications
